

Native trees and plants provide food and shelter to our bees, butterflies, and other pollinators.

Oak trees support up to 557 species of butterflies and moths. Wild cherry and plum can support up to 456 species; and maples support up to 297 species.

Tiger Swallowtail Larvae (Caterpillar)

Black cherry tree

Flowering Branch

Tiger Swallowtail Butterfly

Did you know that baby birds can't eat seeds? Birds rear their young on caterpillars. It takes over 6000 caterpillars to raise a nest of chickadees.
